

Cross connection Program
PWS ID# 4100384
Attachment 1

January 12, 2000

Oxbow village has a completely independent irrigation system for lawn watering.

1) Cross connection potential at each house is limited to use of hoses discharging to the atmosphere for activities such as car washing. Idaho Power will communicate the dangers of system contamination through hoses to the housing occupants.

2) A manual gate valve connects the Copperfield RV Park water system to the Oxbow Village system at the supply tanks. This valve is currently open so the village system is supplied by the park well. All RV and campsite water connections are protected by an atmospheric vacuum breaker backflow device.

Sincerely,

Ralph L. Graham
Hell' s Canyon Field Engineer
