January 18, 2008

Dear Twilight View Community Water System Customer:

This letter is to serve notice to insure compliance with the Twilight View Community Water System cross connection control program ordinance.

All of the residences using our water system were required at final inspection upon completion of construction to install a "Double Check Valve Assembly" (see enclosed Detail Sheet) to their water service. This assembly will maintain an active cross connection program to identify, eliminate or isolate all cross connections that would contaminate our community water system.

Random inspections will be performed to insure that all services have been and remain to be installed as shown on the cross connection control double check valve assembly detail sheet that is enclosed. Please note that any non-compliant water users with improper cross connections could result in loss of water service until modifications are completed and approved.

Thank you in advance for your attention in this matter to ensure that all water users maintain a clean and safe water system.

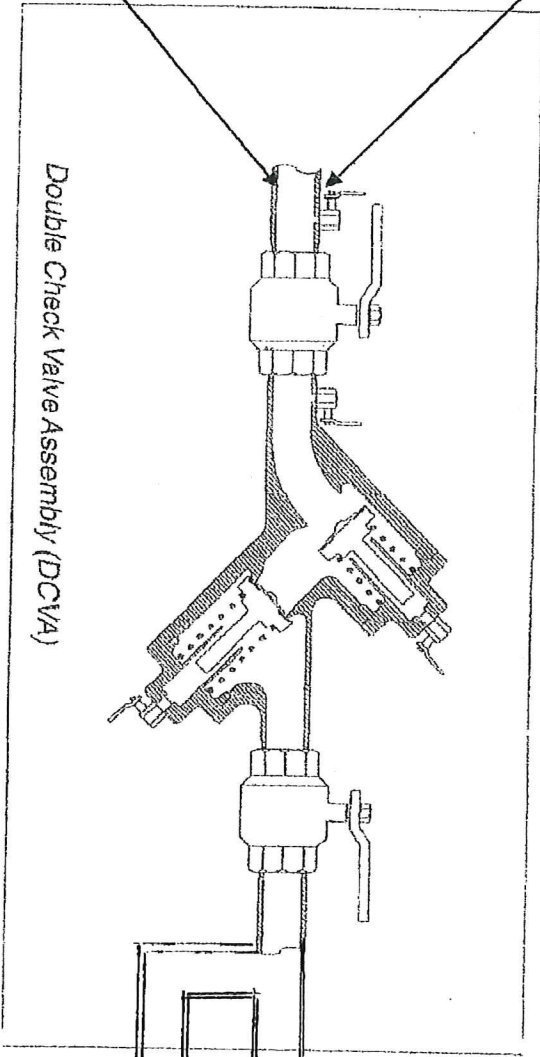

Sincerely,

Twilight View Community Water System

This is also listed on our application for water service and customer must sign that they acknowledge ordinance
