Enabling Authority

The Redwood Water Service Inc. has approved as a Board, at the annual meeting, to protect the safety of our water resource. The purpose of this enabling authority is to give the water board the power to limit or disconnect water service if a cross-connection hazard is identified or suspected. Water service will resume when the problem has been corrected. If a back-flow device is required, a state approved unit will be installed and tested yearly by a certified inspector as is required by law. The expenses incurred to purchase, install and maintain this device is the responsibility of the homeowner.
